DETAILS

Company: [REDACTED]
First name: Karen
Last name: Karri Davies
Address: [REDACTED]
Suburb: [REDACTED]
State: [REDACTED]
Postcode: [REDACTED]
Phone: [REDACTED]
Email: [REDACTED]
Sector: Agriculture

NATIVE VEGETATION CLEARING

1 . Would a strategic approach to clearing, through a strategic purpose permit, benefit you?

Response: unsure
Comments:

2. Is the 'purpose component' reasonable to apply considering the added complexity of assessing this type of clearing permit?

Response: unsure
Comments:

3. Is the proposed fee structure fair and does it adequately reflect differences in the financial capacity of clearing permit applicants?

Response: unsure
Comments:

4. What is the likely impact on your business or industry of the proposed clearing fee structure?

Comments:
Unsure

5. Additional comments regarding Native Vegetation Clearing not addressed in the questions above.

Comments:
Unsure

WATER

6. Do you consider it reasonable for taxpayers to pay 100 per cent of the cost of assessing water licence and permit applications and if so, why?

Response: unsure

Comments:

Tax payers do not pay for a dam that we built, we paid for it.

7. If water licence and permit assessment fees were introduced, what do you consider to be an appropriate fee for a water licence or permit application?

Comments:

We do not understand the rationale behind introducing a fee for a water licence or permit application for a dam that we paid to build. The rationale appears flawed and does not consider private users who take boar water, hobby farm users etc.

8. Would you consider a risk-based model for determining water licence and permit application fees to be appropriate? If not, what basis could the department use to structure fees?

Response: no

Comments:

Need further clarification what is meant by a 'risk-basked model'

9. What would be the likely impact on your business or industry if water licence and permit fees were introduced?

Comments:

As a self-supplier of our water (having built and paid for our own) any water licence and permit fee would be detrimental to our business.

*10. If water licence and permit assessment fees were introduced, how could the collection of fees be timed to better support your business or industry?

For example, would you benefit from paying fees up front, at the end of a licence assessment or annualised over the term of the licence?*

Response: unsure

Comments

Would firstly need to know what they are for budgeting purposes. Each individual business is unique so it is impossible to establish a 'licence assessment' that would be the same for each business. Any substantial fees which are being discussed up to \$6,668 for each licence would kill the wine industry and many of the producers are small. We grow 15 acres of vines producing 50 tonnes.

11 . Additional comments regarding Water licences and permits not addressed in the questions above.

Comments:

the introduction of any cost recovery for self-supply water licenses and native vegetation clearing.

The proposed fees are unfair and will have a severe impact on the hundreds of Mum and Dad business owners who underpin the industry.

The introduction of licensing fees does not consider:

- a) the economic value of the horticultural industry to WA;
- b) the capacity for growers to pay, given financial margins in horticulture are low and there is no capacity to pass the cost onto the consumer;
- c) the inequity resulting from the fact that no charges are being considered for unlicensed bores and dams for livestock production, hobby farms and suburban households;
- d) the poor status of the current level of service provided by the Department of Water and Environmental Regulation (DWER);
- e) growers' current contributions towards commercial hydrological surveys and meter monitoring;
- f) fee level calculation is not transparent;
- g) how to more efficiently and effectively manage water resources.

I note in the Economic Regulation Authority's Inquiry into reform of business licensing in Western Australia, it is stated that:

"Licensing to manage the State's water resources provides another example. Discussions on reforming water regulation in Western Australia have been happening since 1994; however, the Government is yet to draft new water resource management legislation. The delay means the State is administering an outdated water licensing scheme. Processing times for water licence
